BREATHING

Breathing is moving air in and out of the lungs. The air going in and out is called breath. If a person cannot breathe, they will die. Breathing helps people do two very important things. One of them is getting oxygen into the body, because every part of the body needs oxygen to survive. The only way humans can get oxygen is to breathe it in. The other one is getting carbon dioxide (CO₂) out of the body. When the body makes energy, carbon dioxide gets left over. The body needs to get rid of extra carbon dioxide, because too much of it is poisonous. The only way humans can get rid of carbon dioxide is to breathe it out. When a person breathes in, they bring air into their lungs. Air has oxygen in it. The oxygen goes from the lungs into the person's bloodstream. When oxygen goes into the bloodstream, extra carbon dioxide comes out and goes into the lungs. This is called gas exchange: basically, oxygen and carbon dioxide are changing places. Oxygen is now in the bloodstream, which can carry that oxygen around to every part of the body. Also, carbon dioxide is now in the lungs, where it can be breathed out. Adults breathe about 18 times a minute, which is more than 25,000 times a day. Children breathe even faster.

Vocabulary

adult (adj, n): yetişkin

basically (adv): temel olarak

because (conj, trans): ...dığı için, çünkü

bloodstream (n): kan dolaşımı

breath (n): nefes

breathe (v): nefes almak

carry (v): taşımak

die (v): ölmek

lung (n): akciğer

move (v): hareket etmek, taşınmak,

duygulandırmak

poisonous (adj): zehirli

survive (v): hayatta kalmak

Collocations

get snow : kar yağmak

spend time : zaman harcamak/vakit geçirmek

cold water : soğuk su

Preposition

get oxygen : oksijen almak

change place : yeri/pozisyonu değiştirmek

SLEEPWALKING

Sleepwalking usually happens in the first few hours of sleep during deep sleep. Not all sleepwalkers actually walk. Some sit up or stand in bed or act like they're awake when, in fact, they're asleep! But most do get up and move around for a few seconds or for as long as half an hour. Sleepwalkers' eyes are open, but they don't see the same way they do when they're awake. They'll often think they're in different rooms of the house or different places altogether. Sleepwalkers tend to go back to bed on their own and they won't remember what happened in the morning. Sleepwalking is more common in children and affects both boys and girls. It can begin as soon as a child is able to walk. The rate of it in children is as high as 17 percent. Rarely, sleepwalking may begin at any time in the adult life, even when someone is in their seventies. In adults, men are more likely to show aggressive behaviour when they sleepwalk. There's no cure for sleepwalking, but the doctor can talk to you about what's happening and try to find ways to help you sleep more soundly. Medicines are sometimes used if you sleepwalk often or there's a risk for you.

Vocabulary

affect (v): etkilemek
altogether (adv): tamamen
asleep (adj): uyuyan
awake (adj): uyanık

happen (v): meydana gelmek
likely (adj): olası
medicine (n): ilaç, tıp
remember (v): hatırlamak

show (v): göstermek
sleepwalker (n): uyurgezer
sleepwalking (n): uyurgezerlik
tend (v): eğilimli olmak, ilgilenmek

Collocations

deep sleep : derin uyku
adult life : yetişkin hayatı

aggressive behaviour : saldırgan davranış

find way : yol bulmak
sleep soundly : mışıl mışıl uyumak

Preposition

in bed : yatakta
act like : ...gibi davranmak
in the morning : sabahleyin

common in : ...da yaygın
cure for : ... için tedavi
talk to : ...ile konuşmak

talk about : ... hakkında konuşmak
risk for : ... için risk

ASTHMA

Asthma is a serious lung disease that causes breathing problems. These problems, called asthma attacks, can kill. Asthma can affect people of all age groups but often begins in childhood. It can be controlled but not cured. Sufferers must deal with the disease every day. Asthma is common in kids and teens, and members of the family can have it. It can start at an early age and stop when a person has become an adult. Some children grow out of asthma; sometimes it comes back when they are older. It can be mild or so severe that it gets in the way of daily activities. No one knows exactly why some people develop asthma. People with asthma may have a parent or other close relative with asthma. Those who are overweight may be more likely to have it. With asthma, air has a harder time passing through. Airways swell and fill with mucus. The muscles around the airways tighten, making airways narrower. Things that can irritate the airways are called "triggers". Common triggers include cigarette smoke, allergies, and exercise. There's no cure for asthma, but it can be managed to prevent triggers. With medicine and the right care plan, a person can live a healthy and active life.

Vocabulary

adult (adj, n): yetişkin	include (v): içermek	overweight (adj): aşırı kilolu
affect (v): etkilemek	irritate (v): sinirlendirmek, tahriş etmek	prevent (v): önlemek
airway (n): solunum yolu, havayolu	kill (v): öldürmek	severe (adj): ciddi, sevimsiz
asthma (n): astım	likely (adj): olası	sufferer (n): hasta
attack (n): saldırı, eleştiri, hastalık nöbeti	lung (n): akciğer	swell (v): şişmek, artmak
breathing (n): nefes alıp verme	member (n): üye	tighten (v): sıkılaştırmak
control (v): kontrol etmek	mild (adj): yumuşak (hava), hafif, sakin	trigger (n): tetik, tetikleyici
cure (v): tedavi etmek	narrow (adj): dar	

Collocations

serious disease : ciddi hastalık	know exactly : tam olarak bilmek	cigarette smoke : sigara dumanı
age group : yaş grubu	develop asthma : astım gelişmek	healthy life : sağlıklı yaşam
early age : erken, küçük yaş	close relative : yakın akraba	active life : hareketli hayat
daily activity : günlük aktivite		

Preposition

in childhood : çocuklukta	fill with : ... ile doldurmak	at a ... age : ... yaşında
common in : ...da yaygın	cure for : ... için tedavi	

MUSCLES

Muscles are how we move and live. All movement in the body is controlled by muscles. Some muscles work without us thinking, like our heart beating, while other muscles are controlled by our thoughts and allow us to do stuff and move around. All of our muscles together make up the body's muscular system. Muscles are all made of the same material, a type of elastic tissue. Thousands, or even tens of thousands, of small fibers make up each muscle. There are over 600 muscles in the human body. They are under our skin and cover our bones. Muscles often work together to help us move. We don't really have to think about moving each individual muscle. For example, we just think of running and our body does the rest. You may not think of it as a muscular body part, but your face has plenty of muscles. Facial muscles don't all attach directly to bone like they do in the rest of the body. Instead, many of them attach under the skin. Even the smallest movement can turn a smile into a frown. It takes 17 muscles to smile and 43 muscles to frown. You can raise your eyebrow to look surprised or wiggle your nose. Your tongue is also made of a group of muscles that work together to allow you to talk and help you chew food. When we exercise we work our muscles allowing them to become bigger and stronger. Exercise helps keep your muscles strong and flexible. If you don't use your muscles they can shrink and become weak. You can help your muscles stay strong and healthy by exercising every day and using different sets of muscles when you exercise.

Vocabulary

allow (v): izin vermek, olanak sağlamak
control (v): kontrol etmek
cover (v): kaplamak
directly (adv): doğrudan
eyebrow (n): kaş

frown (n): çatık kaş
individual (adj): bireysel
movement (n): hareket, akım
muscle (n): kas, güç
rest (n): dinlenme, geri kalanı

shrink (v): küçülmek
stuff (n): şey
thought (n): düşünce
tissue (n): kâğıt mendil, doku
wiggle (v): oyna(t)mak

Collocations

human body : insan vücudu
facial muscle : yüz kası
look surprised : şaşırmış görünmek

chew food : yiyeceği çiğnemek
keep sth strong : bir şeyi güçlü tutmak

keep sth flexible : bir şeyi esnek tutmak
become weak : zayıflamak

Preposition

made of : ...dan yapılmak
think about : ...hakkında düşünmek

attach to : ...ya iliştmek
under the skin : derinin, cildin altında

turn into : ...ya dönüşmek

KIDNEYS

Your kidneys are a pair of organs that are critical to helping your body work properly. Those organs are called kidney beans because their shape is almost the same as an actual chilli bean. Kidneys are organs that are extremely important in maintaining a healthy body. They perform many crucial functions, such as filtering waste materials from food, medications, and toxic substances. While filtering, the kidneys produce urine to carry the toxins away. The kidneys also make hormones and these hormones help regulate blood pressure, make red blood cells and promote bone health. You have two kidneys, one located on each side of your spine, right below your lowest rib. The kidneys face one another and look kind of like a pair of parentheses. When you are an adult, each kidney is about 3 inches wide and 5 inches long. That is roughly the size of a smartphone. Although humans are born with two kidneys, it is possible for a person to survive with only one. However, the kidneys need an adequate supply of blood, so if there is something wrong with the blood vessels to the kidney, such as a narrowing, this will prevent the kidneys from working efficiently.

Vocabulary

blood (n): kan, soy
bone (n): kemik
carry (v): taşımak
face (v): yüzleşmek, ...ya dönük olmak
filter (v): süz(ül)mek
however (trans): ancak
kidney (n): böbrek
maintain (v): devam ettirmek, bakım yapmak

material (n): madde
medication (n): ilaç tedavisi
narrow (v): daraltmak
possible (adj): mümkün
produce (v): üretmek, neden olmak
regulate (v): düzenlemek
rib (n): kaburga

roughly (adv): kabaca, zorla
shape (n): şekil
size (n): ebat
smartphone (n): akıllı telefon
spine (n): omurga, sırt (kitap), diken
survive (v): hayatta kalmak
waste (n): israf, atık

Collocations

work properly : düzgün çalışmak
extremely important : son derece önemli
healthy body : sağlıklı vücut
perform function : işlev gerçekleştirme-
k/yapmak

crucial function : önemli işlev
toxic substance : zehirli madde
blood pressure : kan basıncı / tansiyon
red blood cell : kırmızı kan hücresi /
alyuvar

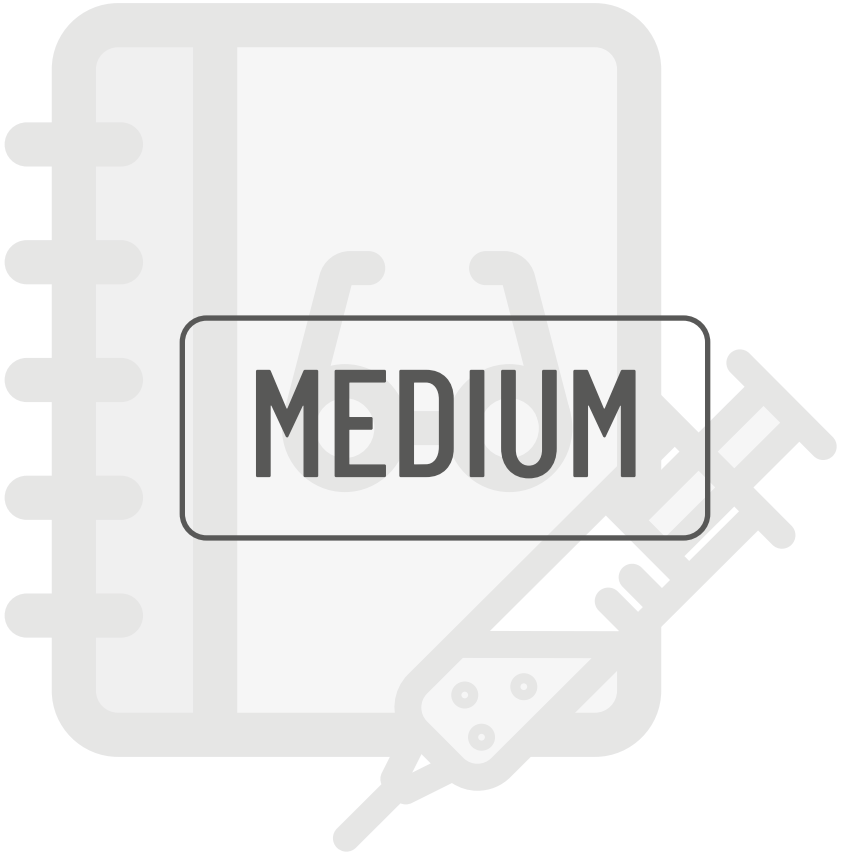

promote health : sağlığı geliştirmek
adequate supply : yeterli kaynak
blood vessel : kan damarı
work effectively : verimli/etkin çalışmak

Preposition

critical to : ...için çok önemli
locate on : ...da konumlanmak

born with : ...ile doğmuş
wrong with : ...da yanlış/sorunlu

prevent sb from doing sth : birinin
...yapmasını önlemek, engellemek

INTELLIGENCE PILLS

Some scientists have predicted that healthy adults and children may one day take drugs to improve their intelligence and intellectual performance. A research group has suggested that such drugs might become as common as coffee or tea within the next couple of decades. To counter this, students taking exams might have to take drugs tests like athletes. There are already drugs that are known to improve mental performance, like Ritalin, which is given to children with problems concentrating. A drug given to people with trouble sleeping also helps people remember numbers. These drugs raise serious legal and moral questions, but people already take vitamins to help them remember things better, so it will not be a simple problem to solve. It will probably be very difficult to decide at what point a food supplement becomes an unfair drug in an examination.

Vocabulary

common (adj): yaygın, ortak
concentrate (v): odaklanmak
counter (v): karşı çıkmak
decide (v): karar vermek
difficult (adj): zor
examination (n): inceleme, sınav
healthy (adj): sağlıklı

improve (v): gelişmek
intellectual (adj): düşünsel
intelligence (n): zekâ, istihbarat
mental (adj): zihinsel
performance (n): performans, gösteri
predict (v): tahmin etmek
probably (adv): muhtemelen

remember (v): hatırlamak
research (n): araştırma
scientist (n): bilim insanı
serious (adj): ciddi
trouble (n): sorun
unfair (adj): adaletsiz

Collocations

take drug : ilaç almak
research may suggest : araştırma gösterebilir

take exam : sınava girmek
legal question : yasal soru
moral question : ahlaki soru, sorun

take vitamin : vitamin almak
solve a problem : bir problemi çözmek
take a pill : hap almak

Preposition

at a point : bir noktada

1. State whether the following are True (T) or False (F):
Only children will take pills to improve their intellectual performance.

A) (T)
B) (F)
2. State whether the following are True (T) or False (F):
Intelligence pills are already as common as coffee or tea.

A) (T)
B) (F)
3. State whether the following are True (T) or False (F):
Students could have to take intelligence drugs tests.

A) (T)
B) (F)

4. State whether the following are True (T) or False (F):
A sleeping pill helps people remember numbers.

A) (T)
B) (F)
5. State whether the following are True (T) or False (F):
Vitamins to help people study are illegal.

A) (T)
B) (F)
6. State whether the following are True (T) or False (F):
Food supplements are unfair.

A) (T)
B) (F)

THE COMMON COLD

The common cold is a viral infectious disease of the upper respiratory tract that primarily affects the nose. It is also possible that the throat, sinuses, and voice box get also affected. It is the most frequent infectious disease in humans. The average adult gets two to four colds a year, while the average child may get six to eight. They occur more commonly during the winter. These infections have been with humanity throughout history. Signs and symptoms may begin less than two days following exposure. They include coughing, sore throat, runny nose, sneezing, headache, and fever. People usually recover in seven to ten days. Some symptoms may last up to three weeks. In those with other health problems, pneumonia may occasionally develop. In the early stages of infection, it can be difficult to distinguish between the common cold and influenza. The latter is commonly referred to as the flu and is usually a more severe disease than the cold. In fact, influenza is a mixture of symptoms of common cold and pneumonia. Influenza patients may suffer from fever, body aches, headache, diarrhoea, sore throat, runny nose, vomiting, and fatigue. There is no vaccine for the common cold. The primary methods of prevention include hand washing, not touching the eyes, nose or mouth with unwashed hands and staying away from other sick people. No cure for the common cold exists, but the symptoms can be treated. Antibiotics should not be used. In addition, evidence from research does not support any benefit from cough medicines.

Vocabulary

affect (v): etkilemek
average (adj): ortalama, vasat
benefit (n): yarar, devlet yardımı
develop (v): gelişmek, ortaya çıkmak
diarrhoea (n): ishal
exist (v): var olmak
exposure (n): maruz kalma, açığa çıkarma, poz (fotoğrafçılıkta)
fatigue (n): bitkinlik
following (prep): ...den sonra
humanity (n): insanlık
include (v): içermek

infection (n): enfeksiyon
influenza (n): grip
last (v): sürmek
latter (adj, n): ikincisi
medicine (n): ilaç, tıp
method (n): yöntem
mixture (n): karışım
occasionally (adv): ara sıra
occur (v): meydana gelmek
pneumonia (n): zatürre
possible (adj): mümkün
prevention (n): önlem

primarily (adv): esas olarak
primary (adj): başlıca, ilkökul, ilk
recover (v): iyileşmek
research (n): araştırma
respiratory (adj): solunumla ilgili
sign (n): işaret
sneeze (v): hapşırma
support (v): desteklemek
symptom (n): belirti
touch (v): dokunmak, duygulandırmak
tract (n): alan, kanal
vomit (v): istifra etmek

Collocations

viral infection : viral enfeksiyon
infectious disease : bulaşıcı hastalık
occur commonly : yaygın olarak/sık meydana gelmek

sore throat : boğaz ağrısı
runny nose : burun akıntısı
health problem : sağlık sorunu
early stage : ilk/erken evre, aşama

severe disease : ağır hastalık
wash hand : el yıkamak
unwashed hand : yıkanmamış el
treat symptom : belirtiyi tedavi etmek

Preposition

throughout history : tarih boyunca
distinguish between : ... ile ... yı ayırt etmek

vaccine for : ... için aşı
cure for : ... için tedavi
evidence from : ...dan gelen kanıt

benefit from : ...dan fayda/yarar
treat with : ...ile tedavi etmek

1. State whether the following are True (T) or False (F):

The common cold is a disease of modern times.

A) (T)

B) (F)

2. State whether the following are True (T) or False (F):

The symptoms do not last for a long time.

A) (T)

B) (F)

3. State whether the following are True (T) or False (F):

The common cold is a more serious disease than the flu.

A) (T)

B) (F)

4. State whether the following are True (T) or False (F):

The common cold is normally treated with antibiotics.

A) (T)

B) (F)

ANOREXIA

Anorexia is an eating disorder which is characterized by unusually low body weight, food self-deprivation, a severe fear of gaining weight, and a craving to be thin. Even though people suffering from anorexia are underweight, they consider themselves as obese. Anorexic people are often in self-denial concerning their low body weight. They eat small amounts of food and exercise excessively. As a consequence, anorexia may lead to severe health problems such as bone loss, heart damage, and infertility. Psychologically, people suffering from anorexia are often depressed. The causes of anorexia are not clearly identified. Specialists recognize that there are at least two types of factors that lead to this type of eating disorder, namely genetic predisposition and cultural factors. It has been proven, for example, that identical twins are more often affected than non-identical ones. Besides, it seems that anorexia is more widely spread in societies that value thinness highly. Also, this eating disorder occurs more often among those people who are involved in careers such as modelling, athletic performance, and dancing. The treatment of anorexia is threefold: medical, nutritional and psychological. The primary focus is to address any serious health problem that may have emerged from the eating disorder such as malnutrition and an unstable heartbeat. Additionally, the treatment focuses on restoring weight to its healthy level through the implementation and supervision of a personalized diet and education about normal eating patterns. Patients have also to undergo a therapy that aims at recognizing the primary issues related to the eating disorder. The therapy also involves addressing and healing from traumatic life events. In addition to that, patients have to learn healthier strategies and coping skills. Finally, medications may be used to help with associated anxiety or depression.

Vocabulary

additionally (adv): ek olarak
address (v): hitap etmek, sorunla
ilgilenmek, adres yazmak
anxiety (n): endişe, isteklilik
associated (adj): ilişkili
besides (pp, trans): ...e ilaveten, ayrıca
bone (n): kemik
concerning (prep): ... ile ilgili
consider (v): düşünmek
coping (n): üstesinden gelme
craving (n): arzu

damage (n): hasar
excessively (adv): aşırı derecede
fear (n): korku
heal (v): iyileştirmek
heartbeat (n): kalp atışı
implementation (n): uygulama
infertility (n): kısırlık
involve (v): içermek, gerektirmek
loss (n): kayıp, zarar
malnutrition (n): yetersiz beslenme
medication (n): ilaç tedavisi

namely (trans): yani
nutritional (adj): besleyici
pattern (n): biçim, desen, (elbise vb) kalıp
prove (v): kanıtlamak, ortaya çıkmak
recognize (v): tanımak, takdir etmek
self-denial (n): kendini tutma
severe (adj): ciddi, sevimsiz
supervision (n): denetim
treatment (n): tedavi, muamele
underweight (adj): yetersiz kilolu
unstable (adj): dengesiz

Collocations

eating disorder : yeme bozukluğu
unusually low : alışılmadık biçimde düşük
body weight : vücut ağırlığı
gain weight : kilo almak
small amount : küçük miktar

health problem : sağlık sorunu
identify clearly : açıkça belirtmek
genetic predisposition : genetik yatkınlık
cultural factors : kültürel faktörler
identical twin : tek yumurta ikizi

spread widely : geniş bir şekilde yayılmak
primary focus : temel öncelik/odak
undergo therapy : terapi görmek
traumatic event : travmatik olay
lose weight : kilo kaybetmek/kilo vermek

Preposition

to be characterized by : ... ile
nitelenmek / tanımlanmak
involved in : ...ya dahil olmak/karışmak
emerge from : ...dan çıkmak

education about : ... hakkında eğitim
aim at : ...yı hedef almak
related to : ...ile ilişkili

help sb with sth : birine bir konuda
yardım etmek
play role in sth : bir şeyde rol oynamak

1. State whether the following are True (T) or False (F):
Although anorexic people see themselves as underweight, they work hard to lose more weight.

A) (T)
B) (F)

2. State whether the following are True (T) or False (F):
People with anorexia suffer from physical as well as psychological complications.

A) (T)
B) (F)

3. State whether the following are True (T) or False (F):
Culture may play a role in the emergence of anorexia.

A) (T)
B) (F)

4. State whether the following are True (T) or False (F):
The treatment of anorexia involves mainly medications.

A) (T)
B) (F)

SMOKING

Smoking is a habit which consists of breathing in a smoke from a burned substance. This substance contains the active alkaloid nicotine which is absorbed into the bloodstream. It may cause various diseases and dysfunctions. Tobacco smoking is the most popular form of smoking. It is practised by over one billion people globally, of whom the majority are in the developing world. Some of the substances are classified as hard narcotics, like heroin, but the use of these substances is very limited as they are usually not commercially available. The practice of smoking can be dated back to as early as 5000 BC, and has been recorded in many different cultures across the world. Early smoking evolved in association with religious ceremonies; as offerings to deities, in cleansing rituals or to allow shamans and priests to alter their minds for various religious purposes. After the European exploration and conquest of the Americas, the practice of smoking tobacco quickly spread to the rest of the world. Smoking has negative health effects, because smoke inhalation inherently poses challenges to various physiologic processes such as respiration. Diseases related to tobacco smoking have been shown to kill approximately half of long term smokers when compared to average mortality rates faced by non-smokers. A 2007 report states that, each year, about 4.9 million people worldwide die as a result of smoking. It is among the leading causes of many diseases such as lung cancer, heart attacks, and birth defects. The health hazards of smoking have caused many countries to institute high taxes on tobacco products, run ads to discourage use, limit ads that promote use, and provide help with quitting for those who do smoke.

Vocabulary

alter (v): değiştirmek
 approximately (adv): yaklaşık olarak
 because (conj, trans): ...dığı için, çünkü
 bloodstream (n): kan dolaşımı
 breathe (v): nefes almak
 classify (v): sınıflandırmak
 conquest (n): fetih
 deity (n): tanrı/tanrıça
 dysfunction (n): işlevsizlik
 evolve (v): evrilmek
 exploration (n): keşif

face (v): yüzleşmek, ...ya dönük olmak
 globally (adv): dünya çapında
 habit (n): alışkanlık
 inhalation (n): soluma
 inherently (adv): doğası gereği
 institute (v): başlatmak
 limit (v): sınırlamak
 majority (n): çoğunluk
 practise (v): alıştırmak yapmak
 priest (n): rahip

process (n): süreç, işlem
 purpose (n): amaç
 quit (v): pes etmek
 record (v): kaydetmek
 respiration (n): solunum
 smoking (n): sigara içme
 substance (n): madde, önem
 tobacco (n): tütün
 various (adj): çeşitli
 worldwide (adj, adv): dünya çapında

Collocations

cause disease : hastalığa neden olmak
developing world : gelişmekte olan dünya
commercially available : satışa sunulmuş
religious ceremony : dini tören, ayin
cleansing ritual : arınma ritüeli
spread quickly : hızla yay(ıl)mak
negative effect : olumsuz etki

pose challenge : engel oluşturmak
mortality rate : ölüm oranı
report may state : rapor ifade edebilir
leading cause : önde gelen neden
lung cancer : akciğer kanseri
heart attack : kalp krizi
health hazard : sağlık tehdidi

high tax : yüksek vergi
run ad : reklam yayınlamak
discourage use : alışkanlıktan vazgeçirmek
provide help : yardım sağlamak
religious practice : dini uygulama
face death : ölümlle yüzleşmek

Preposition

in association with : ... ile bağlantılı olarak
be absorbed in : kendini ...ya vermek, odaklanmak

across the world : dünya çapında
offering to : ...ya sunulan (bir şey)
spread to : ...ya yay(ıl)mak

related to : ...ile ilişkili
tax on : ...ya vergi
associated with : ... ile ilişkili

1. State whether the following are True (T) or False (F):
Tobacco smoking is not the most popular form of smoking.

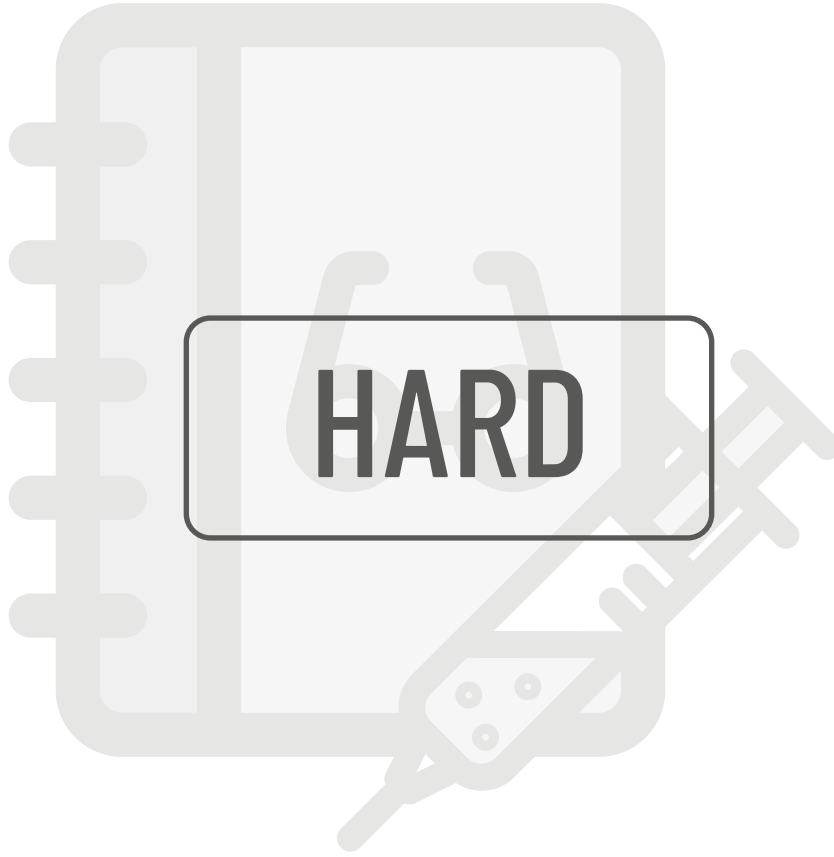

A) (T)
B) (F)

2. State whether the following are True (T) or False (F):
Smoking was originally associated with religious practices.

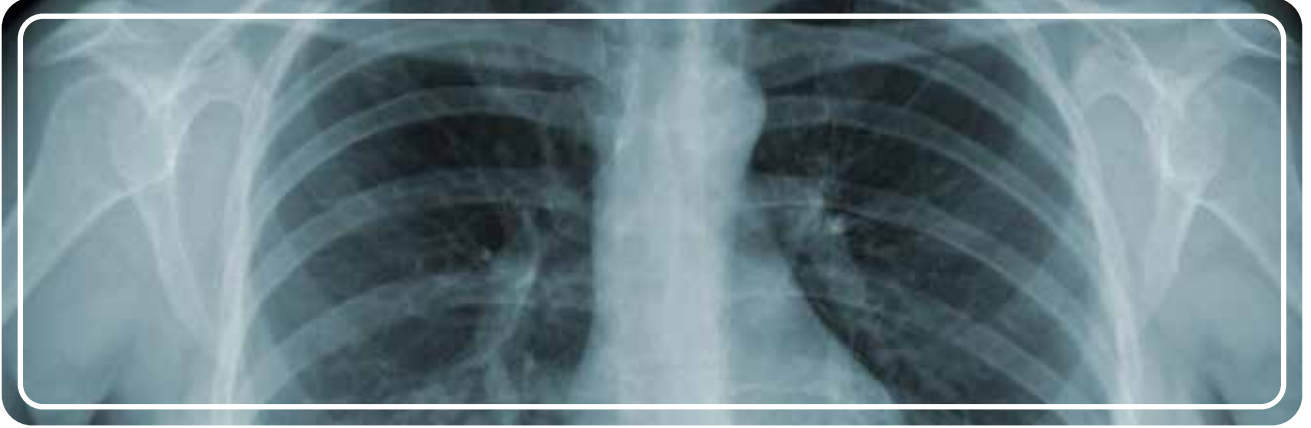

A) (T)
B) (F)

3. State whether the following are True (T) or False (F):
Nearly 50% of long term smokers face death as a result of diseases caused by the habit of smoking.

A) (T)
B) (F)

YÖKDİL SAĞLIK READING PASSAGES

RESPIRATORY SYSTEM

The respiratory system is the group of tissues and organs in your body. They collectively enable you to breathe. This system includes your airways, and your lungs. It also includes the blood vessels and muscles attached to them. These blood vessels and muscles work together so that you can breathe. The respiratory system's main function is to supply oxygen to all the parts of your body. It does this through breathing. Breathing involves breathing in oxygen-rich air and breathing out air filled with carbon dioxide. The exhaled air is a waste gas.

The respiratory system works in several steps. First, you breathe air in through your nose and mouth. They wet and warm the air so it won't irritate your lungs. Then, the air travels through your voice box, down your windpipe, and through two bronchi into your lungs. Tiny mucous-covered hairs in your airways trap foreign particles and germs to filter the air you breathe. Then, you cough or sneeze the particles out of your body.

The diaphragm, abdominal muscles, and other muscles help your lungs expand and contract so you can breathe in and out. When you breathe in, the air goes through the bronchi in your lungs to blood vessels that connect to veins and arteries. These veins and arteries carry the blood throughout your body. When you exhale, the carbon dioxide goes out the same way, exiting your body through your nose and mouth. If you can't breathe or can't breathe well, your body won't receive enough oxygen to keep it running. It will also be poisoned by the carbon dioxide that is building up in your blood with nowhere to go.

Vocabulary

airway (n): solunum yolu, havayolu
artery (n): atardamar, ana yol
breathe (v): nefes almak
bronchus (n): bronş
carry (v): taşımak
collectively (adv): toplu olarak
contract (v): küçülmek, hastalık
kapmak, sözleşme yapmak
cough (v): öksürmek
enable (v): olanak sağlamak
exhale (v): nefes vermek

exit (v): çıkmak
expand (v): genişlemek
filter (v): süz(ül)mek
foreign (adj): yabancı
function (v): çalışmak, işlevini yerine
getirmek
germ (n): mikrop
include (v): içermek
irritate (v): sinirlendirmek, tahriş etmek
lung (n): akciğer
muscle (n): kas, güç

particle (n): parçacık, edat
poison (v): zehirlemek
receive (v): almak
sneeze (v): hapşırmak
step (n): aşama, basamak, adım
tissue (n): kâğıt mendil, doku
trap (v): tuzağa düşürmek
vein (n): toplardamar
waste (n): israf, atık
windpipe (n): soluk borusu

Collocations

respiratory system : solunum sistemi
blood vessel : kan damarı
main function : ana işlev
abdominal muscle : karın kası

health benefit : sağlık yardımı
negative effect : olumsuz etki
brain function : beyin işlevi
atmospheric pressure : atmosferik basınç

function properly : düzgün çalışmak
salivary gland : tükürük bezi
stimulate growth : büyümeyi arttırmak

Prepositions

attached to : ...ya iliştilmiş
supply to : ...ya sağlamak
fill with : ... ile doldurmak
travel through : ...nın içinden geçmek
connect to : ...ile bağlantı kurmak

through the nose : burundan
in succession : üst üste, art arda
as a group : grup olarak, grupça
relationship between : ...arasında ilişki

involved in : ...ya dahil olmak/karışmak
change in : ...da değişiklik
difference between : ...arasındaki fark
remove from : ...den kaldırmak/çıkarmak

1. State whether the following are True (T) or False (F):
The human body requires oxygen to function.
A) (T)
B) (F)
2. State whether the following are True (T) or False (F):
Only the veins carry oxygen around the human body.
A) (T)
B) (F)
3. State whether the following are True (T) or False (F):
Air does not move down the wind pipe.
A) (T)
B) (F)

4. State whether the following are True (T) or False (F):
The air that people breathe out is a waste product.
A) (T)
B) (F)
5. State whether the following are True (T) or False (F):
Air is filtered by small hairs.
A) (T)
B) (F)
6. Which of the following could be another title for this passage?
A) How to Breathe
B) Health and Breathing
C) How the Respiratory System Functions
D) The Health Benefits of Breathing
E) Negative Effects of Carbon Dioxide

READING PASSAGES - HARD

7. The meaning of the word “collectively” in this passage is ----.

- A) in succession
- B) without help
- C) using teamwork
- D) as a group
- E) as individuals

8. The word “waste” is closest in meaning to ----.

- A) unwanted
- B) useless
- C) lost
- D) useful
- E) dying

9. What does the pronoun “It” in this passage refers to?

- A) nose
- B) carbon dioxide
- C) breath
- D) body
- E) oxygen

10. This passage is mainly about ----.

- A) how different levels of oxygen affect brain function
- B) breathing techniques to optimize health and happiness
- C) the causes of excessive carbon dioxide emissions
- D) the relationship between humidity and respiratory infections
- E) how different parts of your body are involved in the process of breathing

11. According to this passage, the function of the hairs in your airways is ----.

- A) to moisten the air you breathe in so it won't irritate your lungs
- B) to slow your breathing so you don't lose too much carbon dioxide
- C) to keep germs and other foreign particles
- D) to register changes in atmospheric quality
- E) non-existent: there are no hairs in your airways

12. This passage states that if you stop breathing, you will die because ----.

- A) your blood will stop circulating
- B) your lungs will collapse due to the difference between internal and external atmospheric pressure
- C) you will build up excess body heat which cannot be ventilated
- D) your body will not receive the oxygen and carbon dioxide it needs to function properly
- E) your body will not receive the oxygen it needs to function properly and will be poisoned by excess carbon dioxide

13. Which of the following does this passage NOT mention as part of your respiratory system?

- A) your salivary glands
- B) your lungs
- C) your diaphragm
- D) your abdominal muscles
- E) your bronchitis

14. This passage implies that ----.

- A) mouth breathing is more dangerous than nose breathing
- B) cold dry air might irritate your lungs if it was not warmed and wetted in your airways
- C) the size of your bronchi determines how likely you are to contract respiratory illnesses
- D) rapid breathing may stimulate the growth of hairs in your airways
- E) the human body does not generate adequate amounts of carbon dioxide

15. According to this passage, what function does your diaphragm play in breathing?

- A) It filters oxygen into your blood
- B) It removes toxins from the air you breathe
- C) It has no function in breathing
- D) It helps your lungs to expand and contract
- E) It filters out excess carbon dioxide

VITAMIN K

Vitamin K plays an important role in helping the blood clot, which prevents too much bleeding. Unlike many other vitamins, vitamin K is not typically used as a dietary supplement.

Vitamin K is actually a group of compounds. The most important of these compounds appears to be vitamin K1 and vitamin K2. You can get Vitamin K1 from leafy greens and some other vegetables. Vitamin K2 is a group of compounds found mostly in meats, cheeses, and eggs, and produced by bacteria.

Vitamin K1 is the main form of vitamin K supplement available in the U.S. Recently, some people have looked to vitamin K2 to treat osteoporosis and steroid-induced bone loss, but the research isn't conclusive. At this point there is not enough data to recommend using vitamin K2 for osteoporosis.

Low levels of vitamin K can increase the risk of uncontrolled bleeding. While vitamin K deficiencies are rare in adults, they are very common in newborn infants. A single injection of vitamin K for newborns is standard. Vitamin K is also used to counter the effects of a big dose of the blood thinner Coumadin. In these cases, a doctor might suggest vitamin K supplements. Uses of vitamin K for cancer, for the symptoms of morning sickness, for the removal of spider veins, and for other conditions are not proven.

Most people get enough vitamin K from their diets. There are no negative effects of vitamin K seen with the levels found in food or supplements. However, this does not mean there is no danger with high doses. You can get vitamin K naturally from foods. Good natural food sources of vitamin K include: vegetables (like spinach, asparagus, and broccoli), beans and soybeans, eggs, strawberries and meat.

Vocabulary

available (adj): mevcut, müsait
bleeding (n): kanama
bone (n): kemik
clot (v): pıhtılaşmak, ahmak
compound (n): bileşik
conclusive (adj): kesin
data (n): veri
however (trans): ancak

injection (n): iğne
loss (n): kayıp, zarar
prevent (v): önlemek
prove (v): kanıtlamak, ortaya çıkmak
recently (adv): son zamanlarda
recommend (v): tavsiye etmek
removal (n): ortadan kaldırma
research (n): araştırma

suggest (v): önermek, tavsiye etmek, (dolaylı olarak) göstermek
treat (v): davranmak, tedavi etmek, ısmarlamak
uncontrolled (adj): kontrol edilemeyen
unlike (prep): ...nın aksine
vegetable (n): sebze

Collocations

blood clot : kan pıhtısı
 dietary supplement : besinsel takviye
 leafy green : yapraklı yeşillik
 counter effect : etkisini azaltmak
 low level : düşük seviye
 increase risk : risk artırmak
 newborn infant : yeni doğan bebek

negative effect : olumsuz etki
 high dose : yüksek doz
 food source : besin kaynağı
 normal practice : normal uygulama
 excellent idea : mükemmel fikir
 health benefit : sağlık yardımı

take supplement : takviye almak
 reduce risk : risk azaltmak
 ease symptom : belirtiyi hafifletmek
 get sick : hastalanmak
 grow old : yaşlanmak
 scientifically proven : bilimsel olarak kanıtlanmış

Prepositions

play role in sth : bir şeyde rol oynamak
 at a point : bir noktada
 use for : ... için kullanmak
 excellent for : ... için mükemmel
 in general : genel olarak/genellikle

present as : ... olarak sunmak
 argument about : ... konusunda tartışma
 important for : ... için önemli
 without the help of : ...nın yardımı

olmadan
 born with : ...ile doğmuş
 study on : ... hakkında çalışma, araştırma
 important to : ... için önemli

1. State whether the following are True (T) or False (F):
 Vitamin K2 is excellent for treating osteoporosis.

A) (T)
 B) (F)

2. State whether the following are True (T) or False (F):
 In general, most people do not get enough vitamin K in their food.

A) (T)
 B) (F)

3. State whether the following are True (T) or False (F):
 Vitamin K is a group of element and hormones.

A) (T)
 B) (F)

4. State whether the following are True (T) or False (F):
 It is normal practise to give new borm babies a vitamin K injection.

A) (T)
 B) (F)

5. State whether the following are True (T) or False (F):
 Vitamin K is important in the normal function of blood.

A) (T)
 B) (F)

6. Which of the following could be another title for this passage?

A) Benefits of Vitamin K
 B) Vitamin K. What is it? Where is it From? And What Does it Do?
 C) The Dangers of Too Much Vitamin K
 D) Why Doctors Love Vitamin K
 E) Vitamin K and Your Daily Diet

READING PASSAGES - HARD

7. The meaning of the word "appear" in this passage is ----.

- A) turn out
- B) present as
- C) show
- D) seem
- E) surprise

8. The word "standard" is closest in meaning to ----.

- A) normal behaviour
- B) excellent idea
- C) a measure
- D) custom
- E) everyday

9. What does the pronoun "this" in this passage refer to?

- A) levels in food
- B) supplements
- C) no negative effects
- D) Vitamin K
- E) most people

10. This passage is mainly about ----.

- A) the health benefits of vitamin K (some proven and some unproven) and the natural sources of vitamin K
- B) the health benefits and the health risks of taking vitamin supplements, and the limitations of scientific testing of supplements
- C) the treatment of hemophilia and other problematic blood conditions
- D) the discovery, testing and marketing of vitamin K
- E) scientific arguments about whether or not vitamin K is actually important for

human health

11. According to this passage, vitamin K has been proven ----.

- A) to reduce the risk of osteoporosis
- B) to ease the symptoms of morning sickness
- C) to remove spider veins
- D) to help blood to clot
- E) to cure cancer

12. This passage says that ----.

- A) most people would be healthier if they took vitamin K supplements; this is especially true for the elderly
- B) most people get enough vitamin K from the food they eat, but newborns and people who take blood thinners may need K supplements
- C) vitamin K is found in most foods, and people who eat too many K-rich foods or take K supplements may get sick because their blood becomes too thick
- D) vitamin K is found in many foods, but it can't be effectively absorbed into the body without the help of special supplements
- E) most people would be healthier if they took vitamin K supplements and vitamin K is found in many foods, but it can't be effectively absorbed into the body without the help of special supplements

13. According to this passage, vitamin K1 is found in ----.

- A) most foods
- B) supplements only—it does not occur in nature
- C) meat and cheese
- D) leafy greens
- E) eggs

14. Which of the following is NOT listed as a good source of vitamin K in this passage?

- A) broccoli
- B) beans
- C) eggs
- D) meat
- E) wheat

15. This passage suggests that —.

- A) people may be born with low levels of vitamin K, though as they grow older their diets usually provide what they need
- B) people are very likely to take vitamin K to cure conditions which it has not been scientifically proven to cure; this can be dangerous
- C) a great deal of research money is going into studies on the health effects of vitamin K
- D) vitamin K is not as important to human health as the other vitamins
- E) vegetarians are likely to not get enough vitamin K1 unless they take supplements

DNA TECHNOLOGY

A very exciting field of study, research and its application is DNA technology. DNA technology is being developed for a variety of purposes and products. Cloning, the process of making identical copies of a gene, is a major component of DNA technology. At first reaction, cloning might elicit images of sci-fi movies, but cloning has provided pest-resistant plants, vaccines, heart attack treatments and even helped construct totally original organisms.

DNA technology and gene cloning are extremely important in the medical and pharmaceutical sector. For example, DNA technology has been used to assist in diagnosing genetic diseases, such as sickle-cell disease and Huntington's disease.

Developing vaccines is another area in which DNA technology is critical. Vaccines are harmless versions of a pathogen, such as a bacterium or virus. Vaccines can be used to 'trick' your body into fighting the harmless version. This means that if you are exposed to a harmful version of the pathogen, you have already built up a defence. There are many ways that DNA technology is used to make vaccines. The most common ways to make a vaccine is by altering the pathogen's genes and mimicking surface proteins of harmful pathogens.

Finally, therapeutic hormones, such as insulin and human growth hormone, are also the result of DNA technology in medicine. For the treatment of diabetes millions of people with diabetes depend on insulin treatments to stay healthy thanks to DNA technology. Also thanks to DNA technology, human growth hormone is used to help children who do not produce adequate amounts of growth hormone in their bodies and suffer from dwarfism.

Vocabulary

alter (v): değiştirmek	field (n): arazi, alan	process (n): süreç, işlem
application (n): başvuru, uygulama (telefon), uygulama	fight (v): kavga etmek, mücadele etmek, savaşmak	product (n): ürün, çarpım, bileşke
cloning (n): klonlama	harmless (adj): zararsız	provide (v): sağlamak
construct (v): inşa etmek	image (n): görüntü	purpose (n): amaç
develop (v): gelişmek, ortaya çıkmak	important (adj): önemli	research (n): araştırma
diagnose (v): teşhis etmek	medical (adj): tıbbi	therapeutic (adj): iyileştirici
elicit (v): ortaya çıkarmak	mimicking (n): taklit etme	totally (adv): tamamen
exciting (adj): heyecan verici	pharmaceutical (adj): eczacılığa ait	treatment (n): tedavi, muamele
		vaccine (n): aşı

Collocations

identical copy : tıpatıp aynı kopya
make copy : kopyasını yapmak, kopya çıkarmak
major component : ana parça/bileşen
heart attack : kalp krizi
extremely important : son derece önemli

diagnose disease : hastalığı teşhis etmek
genetic disease : genetik hastalık
medical condition : tıbbi rahatsızlık
develop vaccine : aşı geliştirmek
build up defence : savunma geliştirmek
stay healthy : sağlıklı kalmak

produce hormone : hormon üretmek
adequate amount : yeterli miktar
reach limit : sınıra ulaşmak
change greatly : büyük ölçüde değiştirmek
growth hormone : büyüme hormonu

Prepositions

assist in : ...da yardım etmek
pass from : ...dan geçmek
exposed to : ...ya maruz kalmış

attitude towards : ...ya karşı tutum
prepare for : ...için hazırlanmak

defence to : ...ya savunma
treat with : ...ile tedavi etmek

1. State whether the following are True (T) or False (F):
Making identical copies of a gene is called cloning.
A) (T)
B) (F)
2. State whether the following are True (T) or False (F):
Cloning and DNA technologies are two separate fields of medical study.
A) (T)
B) (F)
3. State whether the following are True (T) or False (F):
Human growth hormone is used to help children who suffer from dwarfism.
A) (T)
B) (F)

4. State whether the following are True (T) or False (F):
Pest-resistant plants have been developed by using vaccine technologies.
A) (T)
B) (F)
5. State whether the following are True (T) or False (F):
Insulin and growth hormones are the result of DNA technology in medicine.
A) (T)
B) (F)
6. Which of the following could be another title for this passage?
A) Sci-fi Medicine
B) Vaccines that Changed the World
C) DNA Technologies and Therapeutic Hormones
D) Cloning the Perfect Human
E) DNA Technologies and the Future of Medicine

READING PASSAGES - HARD

7. The meaning of the word "reaction" in this passage is ----.

- A) response
- B) feeling
- C) feedback
- D) reply
- E) answer

8. The word "critical" is closest in meaning to ----.

- A) negative
- B) analytical
- C) important
- D) sarcastic
- E) not important

9. The author's attitude towards DNA technologies is ----.

- A) favouring
- B) disinterested
- C) negative
- D) worried
- E) positive

10. Which of the following most accurately states the main idea of the passage?

- A) Ideas that used to be in science fiction have now arrived in the medical world.
- B) DNA technologies such as cloning, vaccines and therapeutic hormones provide huge benefits to people.
- C) The medicines developed using DNA technologies are part of everyday life and people do not know it.
- D) Without DNA technologies we would have no vaccines and millions of lives would not have been saved.
- E) It is dangerous to use DNA technologies and to not be prepared for accidents.

11. The passage mentions each of the following EXCEPT ----.

- A) original organisms have been created through cloning
- B) vaccines have benefited humans more than cloning
- C) cloning has created pest-resistant plants, vaccines, and heart attack treatments
- D) cloning is the process of making identical copies of genes
- E) a major part of DNA technologies is cloning

12. The passage states that cloning is important because ----.

- A) many children have helped by the products developed by cloning
- B) the products developed are very profitable to pharmaceutical companies
- C) genetic conditions can be diagnosed and treated, sometimes before a person is born
- D) without cloning it would not be possible to develop insulin
- E) it has assisted in the developing of therapeutic hormones

13. It is clearly stated in the passage that ---.

- A) vaccines are a pathogen that is harmful
- B) your body can not build up a defence to the pathogen
- C) the only way to make a vaccine is by cloning
- D) a vaccine is dangerous version of a bacterium
- E) vaccines are a harmless version of a pathogen that tricks the body into fighting it

14. According to the passage, ---.

- A) insulin and human growth hormone were developed without DNA technologies
- B) millions of people have their diabetes treated with human growth hormones
- C) human growth hormone is used to help children who do not produce adequate growth hormones
- D) dwarfism can be treated by cloning techniques
- E) diabetes and sickle-cell disease can both be cured using therapeutic hormones

15. We can tell from this passage that ---.

- A) DNA technologies have reached their limit and can do no more
- B) people must be worried that medicine is becoming dangerous
- C) many patients have been saved by human growth hormones
- D) pharmaceutical companies have become very rich from the products developed using DNA technologies
- E) greatly changing the world and the future of medicine is DNA technologies

EATING DISORDERS

Eating disorders are common in America. 1 or 2 out of every 100 students will struggle with an eating disorder. Thousands of teens develop eating disorders every year. Eating disorders are more than going on a diet to lose weight or trying to exercise every day. An eating disorder is an extreme way of thinking about eating and eating behaviour. For example, the diet gradually has less food and less types of food. The most common eating disorders are anorexia nervosa and bulimia nervosa, usually called simply "anorexia" and "bulimia". Some examples are avoidant/restrictive food intake disorder, binge eating, body image disorders, and food phobias.

People with anorexia have a fear of gaining weight and an incorrect view of their body size. These people eat very little and can become underweight. Many teens with anorexia restrict their food intake by dieting, fasting, or excessive exercise. They hardly eat at all. The small amount of food becomes an obsession. The anorexia focuses on calorie counting or eating as little as possible. Others with anorexia may start binge eating and purging. They eat a lot of food and then try to get rid of the calories by vomiting, laxatives, or exercising too much.

Bulimia is similar to anorexia. With bulimia, people might binge eat too much and then vomit or exercise to lose weight. These actions can be dangerous both physically and emotionally. To have bulimia, a person binges and purges regularly. At least once a week for a couple of months. Binge eating is different from going to a party and eating too much pizza. People with bulimia eat a large amount of food at one time and usually in secret. They eat food that is not cooked, frozen, or from the trash. They feel no power to stop the eating. They can only stop once they're too full to eat any more. People with bulimia then purge by vomiting, but they may use laxatives or excessive exercise. Although anorexia and bulimia are very similar, people with anorexia are usually very thin and underweight. But those with bulimia may be an average weight or can be overweight.

Fortunately, eating disorders can be treated. People with eating disorders can get well and learn to eat well. Eating and living are more like family and friends. Eating disorders involve both the mind and body. So medical doctors, mental health professionals, and dietitians will work together to treat a person. Therapy or counseling is a very important part of getting better. In many cases, family therapy is one of the keys to eating healthily. Parents and other family members are important in supporting people. Remember that eating disorders are very common among teens. Treatment options depend on each person and their families. Many treatments involve talking to therapists and working with dietitians and other professionals. Learning to be comfortable at your weight is a process.

Vocabulary

call (v): adlandırmak, telefon etmek, çağırarak
 dangerous (adj): tehlikeli
 dietitian (n): diyetisyen
 emotionally (adv): hisli bir şekilde
 excessive (adj): aşırı
 gradually (adv): aşamalı olarak
 incorrect (adj): yanlış

intake (n): alım
 involve (v): içermek, gerektirmek
 laxative (n): müshil
 obsession (n): takıntı
 once (conj): ...dan sonra
 physically (adv): fiziki olarak
 purge (v): arındırmak
 restrict (v): sınırlamak

simply (adv): yalnızca, tek kelimeyle, basitçe
 support (v): desteklemek
 treat (v): davranmak, tedavi etmek, ısmarlamak
 underweight (adj): yetersiz kilolu
 view (n): manzara, görüş
 vomit (v): istifra etmek

Collocations

eating disorder : yeme bozukluğu
 develop disorder : bozukluk gelişmek
 lose weight : kilo kaybetmek/kilo vermek
 gain weight : kilo almak
 body size : vücut ölçüsü
 average weight : ortalama ağırlık
 medical doctor : tıp doktoru
 mental health : zihinsel sağlık
 important part : önemli kısım

eat healthily : sağlıklı beslenmek
 treatment option : tedavi seçeneği
 take time : zaman almak
 count calorie : kalori saymak
 extremely common : son derece yaygın
 give outline : genel bilgi vermek
 basic structure : temel yapı
 explain briefly : kısaca açıklamak
 explain difference : farkı açıklamak

burn off calorie : kalori yakmak
 put on weight : kilo almak
 use interchangeably : birbirinin yerine kullanmak
 emotionally exhausting : duygusal olarak yorucu
 high quality : yüksek kalite
 make sb sure : birisine temin etmek

Prepositions

play role in sth : bir şeyde rol oynamak
 at a point : bir noktada
 use for : ... için kullanmak
 excellent for : ... için mükemmel
 in general : genel olarak/genellikle

present as : ... olarak sunmak
 argument about : ... konusunda tartışma
 important for : ...için önemli
 without the help of : ...nın yardımı

olmadan
 born with : ...ile doğmuş
 study on : ... hakkında çalışma, araştırma
 important to : ...için önemli

1. State whether the following are True (T) or False (F):
 In America eating disorder are not unusual and affect approximately one or two out of every one hundred people.

A) (T)
 B) (F)

2. State whether the following are True (T) or False (F):
 People who suffer from anorexia nervosa count calories and try to eat very little.

A) (T)
 B) (F)

3. State whether the following are True (T) or False (F):
 Eating disorders seems to increase with age and are extremely common in older people.

A) (T)
 B) (F)

4. State whether the following are True (T) or False (F):
 At this point in time, eating disorders are a life time condition and they can not be treated.

A) (T)
 B) (F)

READING PASSAGES - HARD

5. State whether the following are True (T) or False (F):

There are a variety of eating disorders, the least common of are anorexia nervosa and bulimia nervosa.

- A) (T)
- B) (F)

6. Which of the following could be another title for this passage?

- A) How Common is Bulimia?
- B) What to Eat?
- C) Eating Disorders and Treatments
- D) Bulimia vs Anorexia
- E) Teens and Eating Disorders

7. The meaning of the word “purge” in this passage is —.

- A) clear
- B) clean out
- C) remove
- D) strip
- E) empty

8. The word “common” is closest in meaning to —.

- A) popular
- B) exciting
- C) normal
- D) distinct
- E) cool

9. What does the pronoun “they” in this passage refers to?

- A) people with anorexia
- B) people
- C) women
- D) teens
- E) people with bulimia

10. The primary purpose of the passage is to —.

- A) give an outline of the different kinds of eating disorders that affect people, particularly teens
- B) outline the basic structure of the anorexia disorder
- C) briefly explain eating disorders such as bulimia and anorexia and the possible treatments
- D) contrast anorexia and bulimia and to explain the differences between the two illnesses
- E) the possible treatments that can work in assisting people who suffer from bulimia and anorexia

11. The passage mentions each of the following EXCEPT —.

- A) going on a diet or over exercising is not a form of eating disorder
- B) a classic behaviour of people with eating disorders is the consuming of less and less food over time
- C) a group that is particularly at risk of developing eating disorders is teenagers
- D) there are only two kinds of eating disorder, bulimia and anorexia
- E) the most well known and statistically common eating disorders are bulimia and anorexia

12. According to the passage, which of the following is true of anorexia?

- A) Anorexic people focus on exercising continuously to burn off calories and then eating a lot.
- B) Anorexic people hardly eat, fear gaining weight and are usually underweight.
- C) People who suffer from anorexia have an incorrect view of their bodies and believe they are smaller than they see in the mirror.
- D) A common characteristic of people with anorexia is to eat too much for long periods and then eat nothing for long periods of time.
- E) Anorexic teens are normal weight and fear putting on any weight.

13. According to this paragraph, ---.

- A) bulimia and anorexia are the same disease, the names are used interchangeably
- B) fortunately, bulimia is not a very common type of eating disorder compared to food phobias
- C) bulimia is emotionally exhausting but not physically dangerous
- D) a person who has bulimia loves to binge on their favourite foods
- E) people with bulimia regularly binge on food then purge it by vomiting or exercising

14. According to the passage, treating people with eating disorders ---.

- A) is not possible at this point in time as the issue is too difficult to solve
- B) requires a mix of therapy and medication
- C) will not necessarily allow the sufferers to live normally ever again
- D) only involves a long period of treatment using medication
- E) is focused on meditation and therapy with no medication

15. It can be inferred from the passage that ---.

- A) eating disorders are a common phase for teenagers and it tends to pass quite simply without drama
- B) anorexia and bulimia will become easier to cure over time as medication becomes better and of a higher quality
- C) people with bulimia or anorexia must be supported emotionally and medically as quickly as possible to stop teens and adults dying
- D) for many people being underweight is normal and they should not be embarrassed or ashamed
- E) all teenagers should be forced to meet with a therapist to make sure he or she has not had an eating disorder

MUSCLE CRAMP

A muscle cramp is a strong, painful contraction or tightening of a muscle that comes on suddenly and lasts from a few seconds to several minutes. It often happens in the legs. A muscle cramp is also called a charley horse. Nighttime leg cramps are usually sudden spasms, or tightening of muscles in the calf. The muscle cramps can sometimes happen in the thigh or the foot. They often happen when you are about to fall asleep or wake up.

The cause of muscle cramps isn't always known. Muscle cramps may be caused by many conditions or activities, such as: exercising, injury, or overuse of muscles. During pregnancy, cramps may occur because of decreased amounts of minerals, such as calcium and magnesium, especially in the later months. There are also other causes, for instance, exposure to cold temperatures, especially to cold water, standing on a hard surface for a long time, sitting for a long time, or putting your legs in awkward positions while you sleep. Some medical conditions can also cause muscle cramps, such as blood flow problems, kidney disease, thyroid disease, and multiple sclerosis.

You may need to try different ways to stop a muscle cramp before you find what works best for you. Here are some things you can try: stretch and massage the muscle. Take a warm shower or bath to relax the muscle. A heating pad placed on the muscle can also help. Try using an ice or cold pack. Always keep a cloth between your skin and the ice pack.

You should talk with your doctor if you have muscle cramps that keep coming back or are painful. These may be symptoms of another problem, such as restless legs syndrome. If cramps bother you a lot, or disturb your sleep, your doctor may suggest medicine that relaxes your muscles.

Vocabulary

calf (n): buzağı, baldır
contraction (n): kasılma, kaynaşmış
sözcük
decrease (v): azalmak
happen (v): meydana gelmek
heating (n): ısıtma
injury (n): yaralanma

kidney (n): böbrek
last (v): sürmek
medicine (n): ilaç, tıp
muscle (n): kas, güç
overuse (n): aşırı kullanım
painful (adj): acı verici
restless (adj): huzursuz

suddenly (adv): aniden
suggest (v): önermek, tavsiye etmek,
(dolaylı olarak)
göstermek
symptom (n): belirti
thigh (n): uyluk
tighten (v): sıkılaştırmak

Collocations

sudden spasm : ani kasılma	stretch muscle : kasını germek	disturb sleep : uykuyu bozmak
cold temperature : soğuk sıcaklık	take a shower : duş almak	ask advice : tavsiye istemek
hard surface : sert yüzey	take bath : banyo yapmak	warning sign : uyarı işareti
medical condition : tıbbi rahatsızlık	relax muscle : kas gevşetmek	medical treatment : tıbbi tedavi
blood flow : kan akışı	ice pack : buz torbası	terminal illness : ölümcül hastalık
different way : farklı yol		

Prepositions

to be caused by : ...dan kaynaklanmak	treatment for : ...için tedavi	name for : ...nın adı
during pregnancy : hamilelikte	remedy for : ...ye ilaç, çare, tedavi	at night : geceleyin
exposure to : ...ya maruz kalma	deficient in : ...da eksik	aware of : ...nın farkında
talk with : ...ile konuşmak	lack of : ... eksikliği	charge for : ...dan ücret almak
connection between : ...arasında bağlantı		

- State whether the following are True (T) or False (F):
Night time cramps often occur in the legs.
A) (T)
B) (F)
- State whether the following are True (T) or False (F):
There is no connection between medical conditions and cramps.
A) (T)
B) (F)
- State whether the following are True (T) or False (F):
The causes of muscle cramps are often not known.
A) (T)
B) (F)
- State whether the following are True (T) or False (F):
There are no medicines that can help muscle cramps.
A) (T)
B) (F)
- State whether the following are True (T) or False (F):
If problems with cramps are painful or disturbing it is best to ask advice from your mother.
A) (T)
B) (F)
- Which of the following could be another title for this passage?
A) Causes and Treatments of Cramps
B) How Painful are Cramps?
C) Doctors Advise for People With Cramps
D) Exercises and Muscle Cramps
E) Cramps and Dieting

READING PASSAGES - HARD

7. The meaning of the word “bother” in this passage is —.

- A) recover
- B) harass
- C) notice
- D) mind
- E) annoy

8. The word “things” is closest in meaning to —.

- A) actions
- B) stuffs
- C) positions
- D) exercises
- E) rules

9. What does the pronoun “They” in this passage refers to?

- A) tightening of muscles
- B) foot or thigh
- C) muscle cramps
- D) night time leg cramps
- E) spasms

10. This passage is mainly about —.

- A) muscle cramps as warning signs for major diseases
- B) the history of the medical treatment of muscle cramps
- C) muscle cramps in horses and in humans
- D) causes of, and treatments for, muscle cramps
- E) why women are more likely than men to suffer from muscle cramps

11. According to this passage, —.

- A) you should contact a doctor at the first sign of muscle cramps, because they are often early warning signs of terminal illness
- B) muscle cramps are most common and most severe in people with compromised immune systems
- C) since many different things may cause muscle cramps, you should try different home cures; consult a doctor if the cramps become persistent and painful
- D) there is not much that doctors can do to diagnose or treat muscle cramps
- E) many home remedies for muscle cramps are dangerous

12. Which of these is not listed as a home treatment for muscle cramps in the passage above?

- A) stretching
- B) massage
- C) hot packs
- D) cold packs
- E) mud baths

13. Which of these is not listed as a cause of muscle cramps in the passage above?

- A) mineral deficiencies in pregnant women
- B) exposure to cold temperatures
- C) standing for a long time on a hard surface
- D) lack of sleep
- E) overuse of muscles

14. What is a charley horse, according to this passage?

- A) another name for a muscle cramp
- B) a muscle cramp that happens at night
- C) a muscle cramp caused by too much exercise
- D) a muscle cramp that keeps coming back
- E) an exercise to soothe muscle cramps

15. This passage suggests that ----.

- A) treatment for muscle cramps has improved remarkably in recent years
- B) most people are not aware of the causes and treatments of muscle cramps
- C) muscle cramps can often be successfully eased with home remedies
- D) doctors often charge too much for treating muscle cramps
- E) muscle cramps that are left untreated may become charley horses

CONGESTIVE HEART FAILURE

Heart failure is also known as congestive heart failure. Heart failure occurs when your heart isn't pumping enough blood. As a result, fluid may build up in the legs, lungs, and throughout the body. Heart failure can occur for several reasons. Common causes of heart failure include previous heart attack, high blood pressure, congenital heart disease, enlarged heart, infection of the heart, and diabetes. Heart failure symptoms aren't always obvious. People in the early stages of heart failure may have no symptoms. Others people may ignore symptoms like fatigue or shortness of breath. Sometimes heart failure symptoms are more obvious. Symptoms may include shortness of breath, swelling of the feet and legs, lack of energy, difficulty in sleeping, and impaired memory. Some people are more likely than others to develop heart failure. No one can predict who will develop heart failure. Being aware of the risk factors and seeing a doctor are good strategies for managing heart failure. Heart failure risk factors include high blood pressure, heart attack, enlargement of the heart, family history of heart disease, and diabetes. Your doctor may recommend lifestyle changes such as quitting smoking, low salt intake, losing weight, or reducing your stress level. These changes can help symptoms associated with heart failure and reduce strain on your heart. Many kinds of medications are used for treating heart failure. Your doctor may prescribe ACE inhibitors, beta-blockers, blood thinners, and diuretics. In general, a combination of heart medications is used. If your heart failure is serious, heart transplant surgery may be also considered.

Vocabulary

combination (n): birleşim, kilit şifresi
congenital (adj): doğuştan gelen bir hastalık/durum
consider (v): düşünmek
diuretic (n): idrar söktürücü
fatigue (n): bitkinlik
fluid (n): sıvı
impaired (adj): bozulmuş

include (v): içermek
infection (n): enfeksiyon
inhibitor (n): engelleyici
intake (n): alım
manage (v): yönetmek, başarmak
obvious (adj): bariz
occur (v): meydana gelmek

predict (v): tahmin etmek
prescribe (v): reçete yazmak
pump (v): pompalamak
stress (n): stres, vurgu
surgery (n): ameliyat, muayenehane
swelling (n): şişkinlik
transplant (n): organ nakli

Collocations

common cause : yaygın neden
heart attack : kalp krizi
blood pressure : kan basıncı / tansiyon
enlarged heart : genişlemiş kalp
early stage : ilk/erken evre, aşama
ignore symptom : semptomu yoksaymak
shortness of breath : nefes darlığı
risk factor : risk faktörü
family history : aile öyküsü
lifestyle change : yaşam tarzı değişikliği

quit smoking : sigara içmeyi bırakmak
lose weight : kilo kaybetmek/kilo vermek
reduce level : seviyesini azaltmak
reduce strain : gerginliği/yükü azaltmak
predict easily : kolayca tahmin etmek
pump blood : kan pompalamak
make sth clear : bir şeyi açıklığa kavuşturmak
main cause : ana neden

give overview : görüş sunmak
save life : hayat kurtarmak
reduce risk : riski azaltmak
take medication : ilaç almak
work effectively : verimli/etkin çalışmak
take drug : ilaç almak
treat effectively : etkili bir şekilde tedavi etmek

Prepositions

be known as : ... olarak bilinmek
lack of : ... eksikliği
difficulty in : ...da zorluk
aware of : ...nın farkında
strategy for : ...için strateji
associated with : ... ile ilişkili

strain on : ... üzerinde yük/gerginlik
in general : genel olarak/genellikle
to be caused by : ...dan kaynaklanmak
name for : ...nın adı
recover from : ...dan kurtulmak, iyileşmek

at risk : tehlikede, riskte
research into : ...hakkında araştırma
information about : ... hakkında bilgi
good at : ...konusunda iyi
reaction with : ...ile tepkime

1. State whether the following are True (T) or False (F):
In most cases of heart failure, the cause of the heart failure is diabetes.

A) (T)
B) (F)

2. State whether the following are True (T) or False (F):
Another name for congestive heart failure is simply, heart failure.

A) (T)
B) (F)

3. State whether the following are True (T) or False (F):
For many people, the symptoms of heart failure are not always very obvious or easy to understand.

A) (T)
B) (F)

4. State whether the following are True (T) or False (F):
In modern medicine, doctors can easily predict who is going to have a heart attack.

A) (T)
B) (F)

5. State whether the following are True (T) or False (F):
When a person has a heart failure the heart starts to pump too much blood around the body.

A) (T)
B) (F)

6. Which of the following could be another title for this passage?

A) Are you Prepared?
B) The Basics Facts of Heart Disease
C) Recovering from Heart Failure
D) Genetics and Heart Disease
E) Who is at Risk of Congestive Heart Failure

READING PASSAGES - HARD

7. The meaning of the word "obvious" in this passage is ----.

- A) noticeable
- B) bright
- C) clear
- D) understandable
- E) important

8. The word "strain" is closest in meaning to ----.

- A) push
- B) stress
- C) fatigue
- D) exercise
- E) fight

9. The passage is best described as being ----.

- A) confusing
- B) informative
- C) poorly-researched
- D) academic
- E) medical

10. The primary purpose of the passage is to ----.

- A) make clear the main causes of heart disease and the research into these causes
- B) give an overview of the basic information about what heart disease, its symptoms, risks and treatments
- C) explain the different types of heart diseases that a person may suffer from, and to give a brief overview
- D) educate the reader about the different types of medication that are required to save lives and prevent heart disease
- E) make the reader aware of the ways to avoid heart disease by lifestyle changes

11. According to the passage, which of the following is true of heart failure symptoms?

- A) Shortness of breath is an obvious symptom of heart failure and is never ignored.
- B) It is impossible to ignore the symptoms of heart failure as they are life changing.
- C) In the early stages of heart disease most people are very aware and scared of the symptoms like shortness of breath or lack of energy.
- D) The symptoms of heart failure are sometimes obvious, and sometimes not obvious.
- E) The symptoms of heart failure are always very clear and easy to notice.

12. The passage mentions each of the following EXCEPT ----.

- A) at this point in time it is very difficult to know who will develop heart disease
- B) family heart disease history and diabetes are both risk factors of congestive heart failure
- C) for people who want to manage the risks of heart disease it is best to see a doctor
- D) not everybody is at the same risk of suffering from heart failure
- E) doctors are very good at knowing the heart disease risk factors and predicting who will develop heart disease

13. It is clearly stated in the passage that ----.

- A) unfortunately, changing your lifestyle does not help reducing the risks of having a heart failure
- B) most doctors do not recommend lifestyle changes but do recommend medication
- C) by making doctor recommended lifestyle changes, the strain on your heart can be reduced
- D) losing weight or stopping smoking are better treatment for heart failure than an operation
- E) if you change your lifestyle by quitting smoking and losing weight it is not necessary to take medication

14. According to the passage, medication --

--.

- A) is rarely recommended by a doctor
- B) does not work effectively if the patient does not make lifestyle changes
- C) types are never mixed as they may have negative reactions with each other
- D) is often used for heart failures and generally more than one type at the same time
- E) such as beta-blocker and blood thinners can not be used if the patient is making lifestyle changes

15. We can tell from this passage that ----.

- A) nobody, including doctors, knows very much about heart disease
- B) if a person has a healthy lifestyle he or she will not develop heart failure
- C) heart failure is a serious problem that requires lifestyle change, medication and surgery to effectively treat and cure
- D) without taking drugs it is impossible to do anything for heart failure
- E) the symptoms of heart failure are very simple and clear and all people should learn these symptoms

YDS DERSLERİ

Çeviri, kelime, okuma çalışmaları ve soru çözüm stratejileri ile seviyeniz ne olursa olsun sizi YDS'ye eksiksiz hazırlayacak internetin olduğu her yerden istediğiniz zaman ulaşabileceğiniz online eğitimler sunuyoruz.

YÖKDİL DERSLERİ

Sosyal Bilimler, Sağlık Bilimleri ve Fen Bilimleri alanlarına yönelik çeviri, kelime, okuma çalışmaları ve soru çözüm stratejileri ile seviyeniz ne olursa olsun sizi YÖKDİL'e eksiksiz hazırlayacak internetin olduğu her yerden istediğiniz zaman ulaşabileceğiniz online eğitimler sunuyoruz.

ÇEVİRİ DERSLERİ

İster sınav için ister akademik kariyeriniz için katılabileceğiniz Akademik Çeviri Dersleri ile kısa sürede İngilizce'den Türkçe'ye çeviri bilginizi geliştirebilirsiniz. Çeviri dersleri aracılığıyla çeviri bilginizin yanı sıra hem okuma-yazma becerinizi hem de kelime bilginizi ileri seviyeye taşıyabilirsiniz.

KİTAPLAR

YDS ve YÖKDİL'e yönelik titizlikle hazırladığımız kitaplarımızı, internete erişiminizin olmadığı zamanlarda YDS ve YÖKDİL sınavlarına eksiksiz hazırlanmak için rehber olarak kullanabilirsiniz.

ONLINE UYGULAMALAR

İnternete bağlanabilen tüm cihazlarda rahatça kullanabileceğiniz İngilizce öğrenme uygulamalarımızla, öğrenmeyi hem zevkli hale getiriyor hem de bireyselleştiriyoruz. Üstelik tüm uygulamalarımızı online derslere katılan kullanıcılara ücretsiz sunuyoruz.
